

CLIENT DELIVERY

Current State

Future State

Plan to get there

Client Retention is a Top Priority

Digital Account Management

- The ability to keep clients ***consistently*** happy
 - To OWN the account
 - To care about the client
 - To know what the client needs
- Be able to ***constantly*** identify ways to increase their business's revenue using digital solutions
- Winning repeat business from existing clients
- Extending their agency's reach into the client's business

Account Management Expectations

- Take on and own the client as a new account
- Build rapport and trust with the client
- Deal with any non-project related requests a client may send through
- Pro-actively spot opportunities, suggest and sell genuinely useful solutions to the client

Role of Digital Account Manager

Identify KPIs

Plan strategy

Develop briefs

Manage research resources and providers

Ideate with creative and media partners

Leverage insights

Provide expertise on brand and category

Uncover opportunities

Grow business

Champion new initiatives

Skill Set

CLIENT MANAGEMENT

- Build and maintain client relationships as the primary contact point
- Responsible for day-to-day management of clients, requests and accounts

Digital Account Management

Define

Plan

Ideate

Skill Set

TACTICAL AND STRATEGIC SALES

- Identify new sales opportunities within existing accounts
- Spearhead client meetings, presentations and account winning client pitches
- Provide sales and project documentation including;
 - Proposals for upsells, quoting, contracts and budgeting
- Lead, write and present client account strategy

Skill Set

ANALYSIS AND REPORTING

- In-depth analysis of web analytics to produce monthly reports with key recommendations for client
- Monitoring and understanding their clients markets; be aware of market issues and competitive activity

Skill Set

CONSULTANCY

- Information Architecture, SEO, PPC, and Social Media consultancy
- Be their most trusted advisor

Skill Set

INTERNAL AND PERSONAL

- Proven digital creative and technical experience
- Manage or work with the production teams to ensure delivery of projects is on time and on budget
- Reporting monthly to the agency management team on their activities

Great Digital Account Management

A burning passion for all things web.

They live and breathe it, during the day and when they go home – they *absolutely love it* and can't get enough.

Skill Set

Ok, so other than the burning passion thing, here's what else they tend to have:

- The ability to provide quality solutions to the client (that they love) because it helps achieve their business aims, but also aligns with their web agency's business strategy – clever
- An honest addiction to the web that enables them to be able to know about and suggest new solutions to clients that are cutting edge and no competitors have started to adopt yet
- Enough web design and development knowledge that earns the respect of both production teams and clients
- Enough knowledge to handle the whole process mostly alone, right up until the production phase needs to begin
- The willingness to personally research any digital topic they need to in order to be able to speak to the client with complete confidence without relying too much on creative or technical production resource

Structured Process

Right now, we are not following a structured process for taking new or existing client requests and producing quotes

We are running big risks of over selling, under quoting and / or missing critical requirements – and I *guarantee* this will invariably result in someone needing to spend more time to fix it!

Ideas

- Weekly account management meetings
- For ongoing clients documented call at least 1x per month.
- Send a personal note with their email with their report each month about what's new and ideas for opportunities
- Set google alerts about their industry, principles, local news, weather...
Example: Any restaurant clients should have had a personal email from you about menus showing on serps
- Set google alerts about marketing to their clients and share ideas or news...
- Know who their main competitors are
- Know their industry leaders, follow them...
- Post to their social profiles at least 1x per month as yourself. Ifttt.com
- Follow their profiles and share their content.
- Personally review their site and analytics to identify opportunities.
- Share good news
- Create relationships with their staff
- Send bday cards to clients and staff

Deliverables

What I want to see

- Formal process for account managers
- Client profile sheet – To be filled out by each account manager
- Client contact report – Monthly
 - Call – details
 - Shares – Social
 - Email correspondence
 - Opportunities identified

Advice Delivery Organization

- Account Management Roles
- Delivery Executive
 - Mark Hazleton
 - James Hall
 - Heather Langley
- Delivery Lead
 - Nayra Salamanca
 - Jeff Powell
 - Carli Odle
- Define Consistent Process
- Must Scale to all current and future clients
 - Small Business
 - Enterprise Account
 - Nationally Local
 - LSS /Technology

Program Management Office - PMO

- Centralized operations unit for a client
- Defined organization rather than temporary project team
- Partners with client management to work together with set of defined processes
- Accountable for:
 - Client satisfaction
 - Project Delivery
 - Communication
 - Risk management
 - Issue resolution
 - Contract administration
- Why a Program Office?
 - To address the dependencies between projects for a single client
 - Provide centralized oversight of all Client work
 - Provide organization to insure consistent quality of delivered projects
 - Provide a set of process and deliverables that are consistent across all Advice clients

PMO Executive Team

- Consists of Sales, Delivery and Strategy
 - Pursuit leadership
 - C-Level client contact
 - Negotiates contracts (SOW)
 - Business case development
- Delivery Executive
 - Project Estimation and Pricing for SOW
 - Identifies Additional Opportunities
 - Delivery oversight
 - Project planning / scheduling
 - Project profit and loss (Project Economics)

PMO Delivery Lead

- Responsible for Client satisfaction - day to day
- Manages Task Delivery/Issue Tracking
- Coordinate Fulfillment :
 - Paid Media
 - Design / Development
 - SEO / Local
 - Social
 - Content
 - Analytics
 - CRO

Delivery Leadership – Next Steps Update

- Delivery Execution on existing Clients
 - Standing Tuesday meeting to review client delivery status across Advice
- Define Client Programs
 - Consolidate all Account Lists (Financial, Delivery, Development, SEO, Former SMB, Team Desk) – Publish to Team Desk by March 4th) – Maintain until migration to Projector (TBD)
 - Assign Executive, Team Leads for each client (Publish to Team Desk by March 4th)
 - Initial teams will be straight mapping to current assignments, expect to balance the list in the first month.
 - Interview Sales to make sure we have adequate transition to Delivery Executive (Friday 2/28)
- Integrate PMO with established Process for SOW Deliverables and Estimates
- Enterprise Wrike Standards (Under Review by Delivery Organization – Publish by March 6)
 - **Define, Document, Train, Enforce**
- Enterprise Reporting Standards (Under Review by Delivery Organization)
 - **Define, Document, Deliver**

The Program Management Approach

- Provide an organization to collaborate with the Client, led by Delivery Lead who supports the PMO Executive team
- Support the best practices within Advice Interactive
 - The Project Charter Process
 - Change Management
 - Communication

What is a Project?

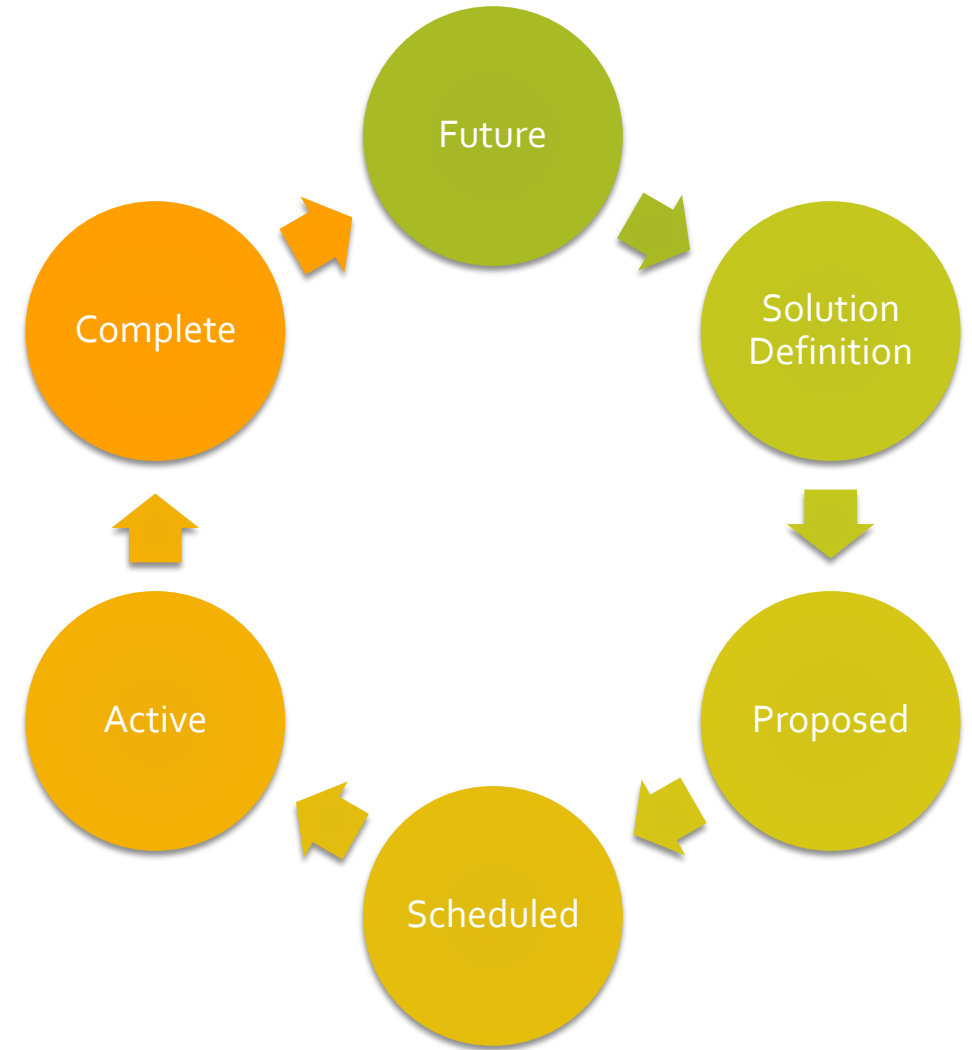

- Has a beginning and an end
- Is defined by specific objectives (deliverables)
- Is conducted by a well-defined organization
- Has a single lead who is responsible for its success
- Is defined by identifying the starting point and the goal and the route between them
- Project Economics
 - Has a defined project code to manage time and expenses
 - Has a budget defined in a executed Statement of Work, managed thru defined change control procedures

Project Charter

- Charter process is an exercise with the client leadership
- Created from fully Executed Statement of Work
- Used to guide a project from idea to completion
- All projects go through the charter process
- A staged process

Project Charter

- Future
 - An opportunity has been identified.
- Solution Definition
 - A team defines the project and create a proposal
- Proposed
 - Advice has presented a proposal for approval
- Scheduled
 - Project is approved and a team is being assigned
- In Progress
- Complete
 - The project has been delivered

Project Manager

- Key client project contact
- Responsibilities include:
 - Focus on a limited scope
 - Communication internally and with client
 - Defining a reasonable and acceptable scope of work with project team
 - Obtaining client approvals
 - Managing a project's development, internally and externally (high quality, on budget, on time)
 - Change management / Issue Management
 - Risk management

Client Change Management

- Change is inevitable
 - The project management process is creative, and will naturally bring about some change.
- Set a tolerance level
 - Informal change control can be used when the project budget and schedule are not affected. You still want to document any change to scope.
- Manage expectations as well as scope
 - Managing the perceptions of team members and the user community is just as important as managing scope.
 - Can't be used for just financial changes, the process is used whenever the Scope (What is being done), Schedule (When is it being done) or Price (What is the cost of the change)
 - Always present the client with a choice, never dictate a change to a client.

Change Management Process

- **Initiation**
 - A change to the project scope, schedule, or budget is identified
- **Impact Assessment**
 - Advice will review the request and document the impact of the change on the current scope, schedule, and project budget.
- **Approval**
 - The client project sponsor, and the Advice project manager will sign the change request form.
- **Implementation**
 - Advice will incorporate the change into the overall project scope and republish the project schedule, budget, and scope definition documents as needed.

Client Communication

- High-level communications
 - Allows a breadth of information to be reviewed at a surface level. This communication often is the catalyst for identifying items that need to be tactically discussed. Typically between client executive and advice executive.
- Tactical communications
 - Allows a detailed discussion to occur typically about a specified topic. This communication is usually between the team lead and the client.

Client Status

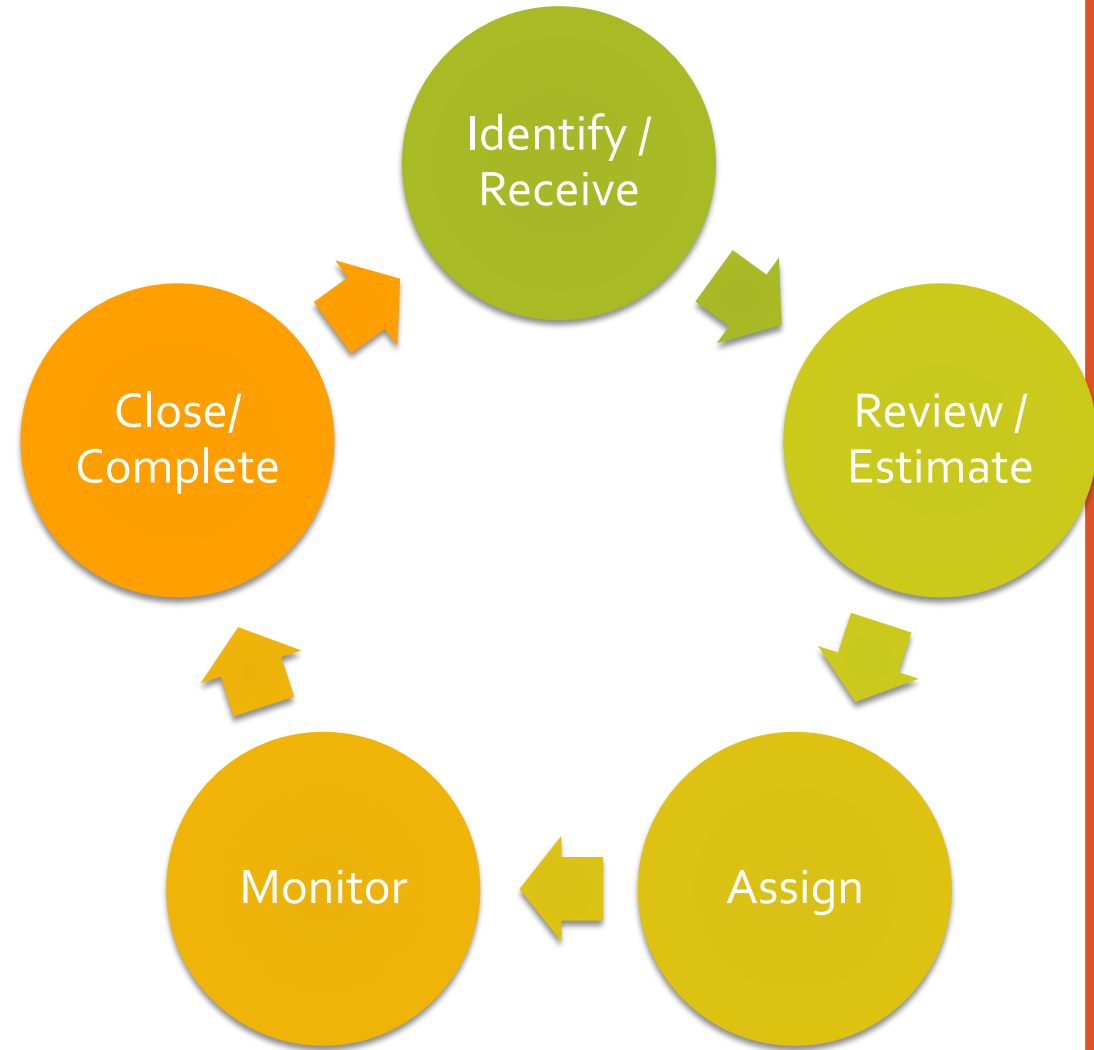

- Weekly summary of the status of all ongoing and planned projects
- Status is summarized by Color
 - Red
 - Requires Immediate Senior Management Attention
 - Team Lead is actively working on resolution
 - Yellow
 - Requires project sponsor attention
 - Green
 - Project is on budget, scope, and schedule

Client Status Reporting

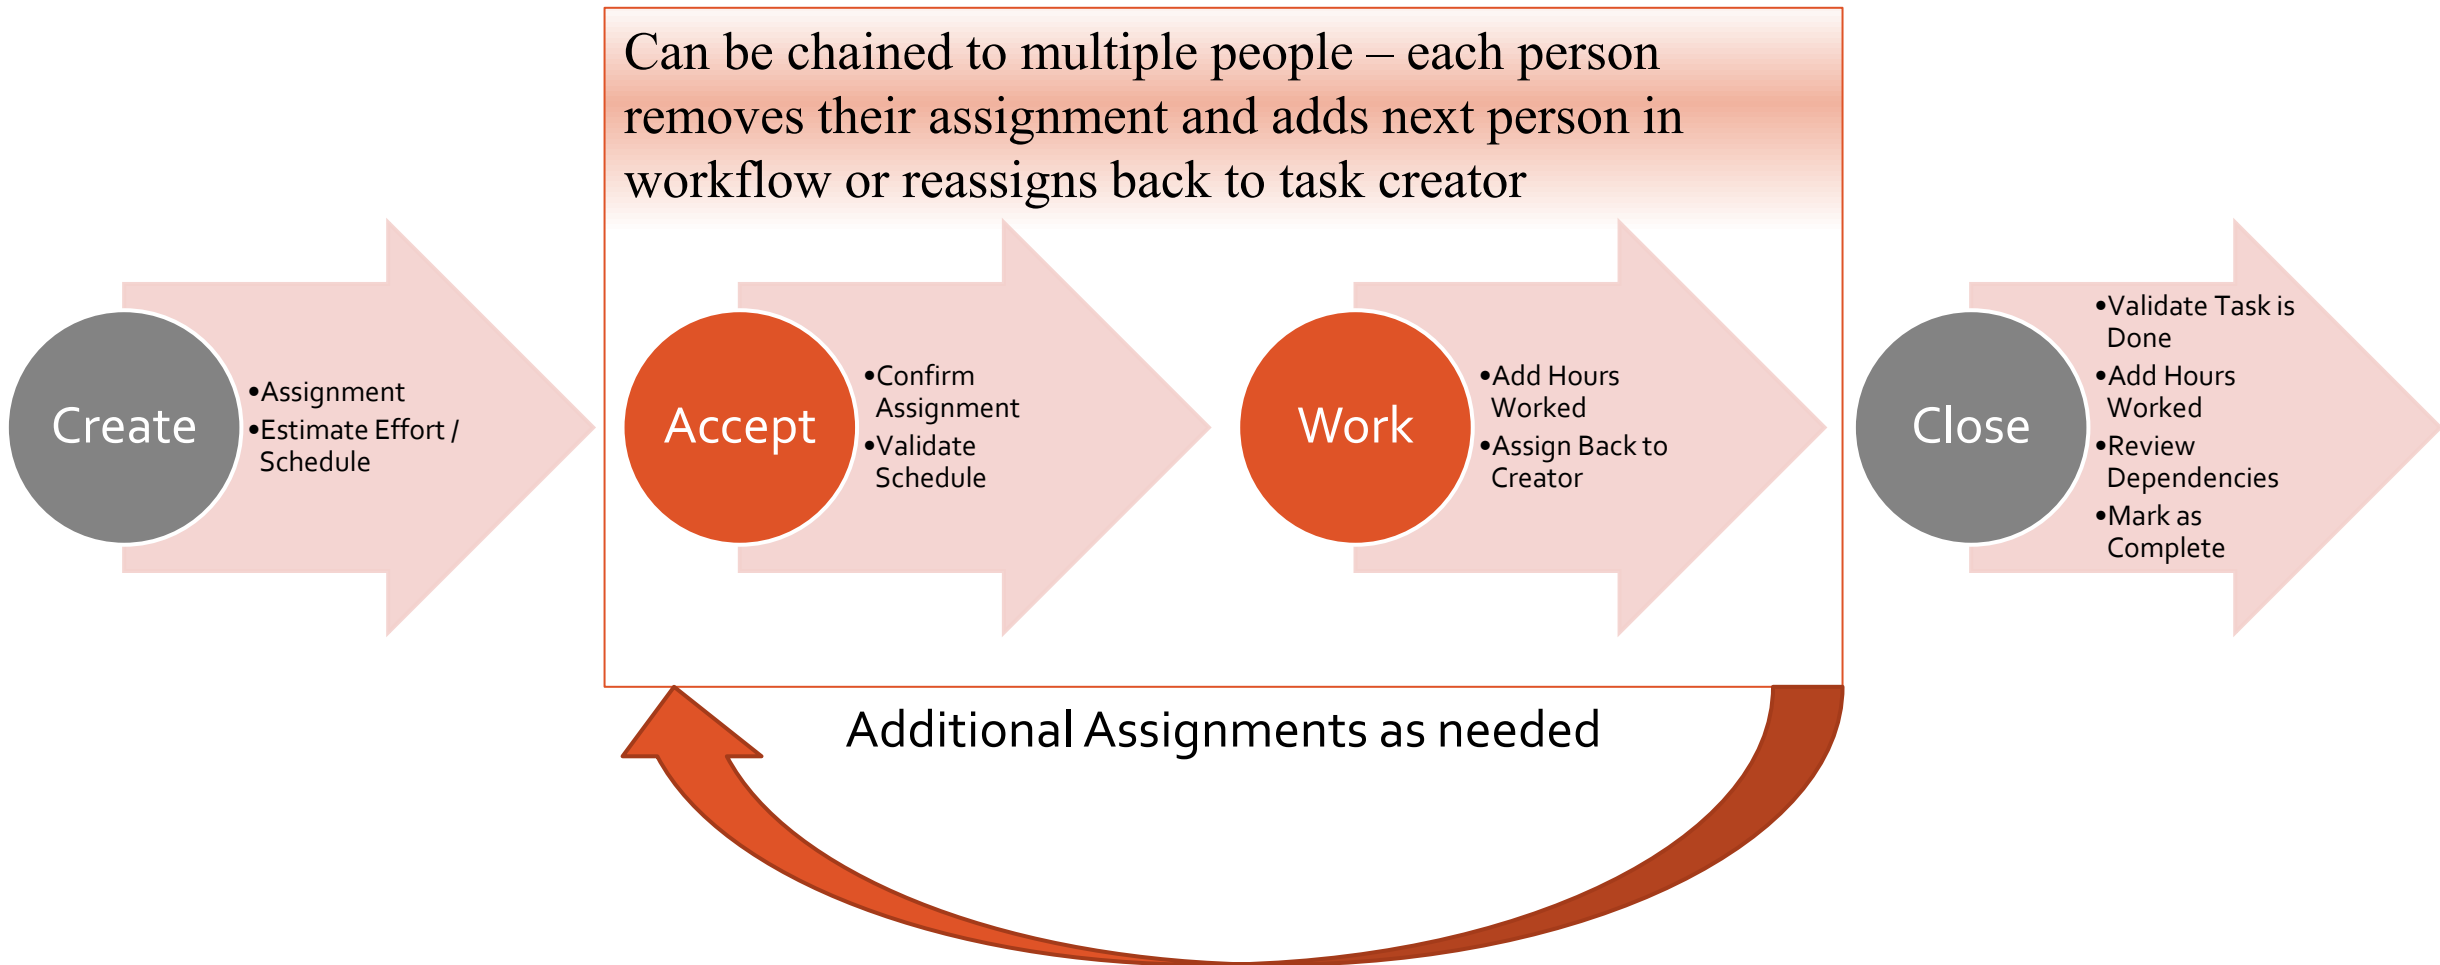

- Overall Project Status (Red, Yellow, Green)
- Accomplishments This Week
- Planned Activities for Next Week
- Issues Needing Action
- Issues Resolved
- Budget
- Schedule (High level status of major project milestones)

Issue/Task Life Cycle

- Identify / Receive
- Review / Estimate
- Assign
- Monitor
- Close/Complete
Document Resolution

Issue Process Flow

Time Tracking Best Practices

- Time is captured for a single project
- Time is captured in reasonable increments (15, 30, 60)
- Time from multiple sub tasks can be added to a top level task (i.e. Project Management)

Task Tracking Best Practices

Required

- A Task is only for a single project (SOW)
- Hours worked on a task are added to the task
- Only the task creator should close out a task
- Tasks should be for a single effort, don't include lists of tasks inside a tasks
- Tasks always have the root project folder associated with them

Suggestions

- Task Naming standards is up to each account
- Keep names short and tied to deliverables in the SOW where possible
- Task should be high level where possible

Task Standards

- All Clients have a 'folder' under the "*Clients" folder in Wrike. The name should be as short as possible, but still recognizable.
- A Project is defined by a Statement of Work (SOW) stored in the "Folder Information" for the root folder for that Project
- Each task is specific to a single project
- Each task is created in the base project folder, additional tags (i.e. sub folders) can be added to allow for easier management of tasks
- Only the task creator should mark a task as Complete
- When you complete work on a task:
 - Add a brief comment to indicate the work is complete
 - Add your hours you spent on the task
 - Assign it to the person who assigned you the task.
 - Remove the assignment to you.
 - Do not set task to complete.

Document Best Practices

- SOW goes in the information of the root of the project folder
- Final Deliverables go here as well
- Managed by Client Team Lead

Our Client's Objectives

- Maintain synergies across marketing channels
- Architect functional websites with brand distinctions and site usability
- Acquire and retain customers by providing a superior site experience
- Ensuring cost effective and timely internet development services
- Utilize new technologies
- Develop actionable measurement and reporting

Client Challenges

- Create a long term relationship over many successful projects
- Manage Project Interdependencies
- Scope Management
- Client participation in account planning (Define Future Opportunities)
- Managing growth
- Actionable measurement and reporting
- Ensuring cost effective and timely service delivery
